

ABSTRACT OF THE DISCLOSURE (mark-up)

~~It is arranged that in a~~ A fixed type constant velocity joint ~~+~~ having has a plurality of torque transmitting ball tacks~~30~~, the torsional angle at the input torque 0 Nm in a torque-torsional angle diagram be approximately 0. Further, the torsional rigidity in the vicinity of input torque 0 Nm in the torque-torsional angle diagram is placed in a range of 1.5 Nm/deg to 6 Nm/deg.
